

How to include CSS in the webpage?

1058 Administrator Fri, Jun 3, 2022 [CSS](#) 0 1597

There are different ways to include a CSS in a webpage,

1. External Style Sheet: An external file linked to your HTML document: Using a link tag, we can link the style sheet to the HTML page.

2. Embed CSS with a style tag: A set of CSS styles included within your HTML page.

Add your CSS rules between the opening and closing style tags and write your CSS exactly the same way as you do in stand-alone stylesheet files.

3. By adding inline styles to HTML elements (CSS rules applied directly within an HTML tag.): Style can be added directly to the HTML element using a style tag.

4. Import a stylesheet file (An external file imported into another CSS file): Another way to add CSS is by using the @import rule. This is to add a new CSS file within CSS itself.
