What is the difference between inline, inline-block, and block?

1063 Administrator Fri, Jun 3, 2022 [CSS](#)   0 1624

Block Element: The block elements always start on a new line. They will also take space for an entire row or width.

List of block elements are <div>, <p>.

Inline Elements: Inline elements don't start on a new line, they appear on the same line as the content and tags beside them.

Some examples of inline elements are <a>, <span> , <strong>, and <img> tags.

Inline Block Elements: Inline-block elements are similar to inline elements, except they can have padding and margins and set height and width values.
