dygraphs JS Charts - Free JavaScript Charts

120 Administrator Sun, Dec 13, 2009 Web Development 0 4031

dygraphs is an open source **JavaScript charting library** for displaying data of time series.It can show values on mouseover that makes discovering the values easier & zooms any selected area.The data can be called from a CSV file or mentioned in the code staticly (in CSV format).

The library can handle fractions intelligently & supports error bands around data series.It works in all major browsers (IE requires excanvas) & it is compatible with the Google Visualization API.
