Feature List is a simple jQuery plugin that enables simple and easy creation of an interactive "Featured Items" widget. The size is less than 2k. And it is reusable on multiple containers and work as a slideshow. Feature List can be styled easily with custom HTML/CSS too.

This plugin is managed to implement quite quickly. The script requires two arrays of items – for tabs and output. When user clicks on one of tab the script finds corresponding output item by index and starts fading.

Requirements: jQuery Library
