

IE6 CSS Fixer is a free web-based tool to decrease the monkey work when starting an **IE6 CSS fix** file. It is not a magical one-click solution that will solve every possible problem, it can even create new errors, but it is a handy solution that offers customized fixes for commonly known problems.

The tool simply checks your CSS file & creates new CSS rules for the possible problematic objects. New rules can be inserted as a separate CSS file easily to check if they cause any problems.

Some CSS fixes it offers are:

- Adding display:inline to floated elements
- Converting min-height values
- Fixing negative margins & more
