Create Full Screen Slideshows With Supersized
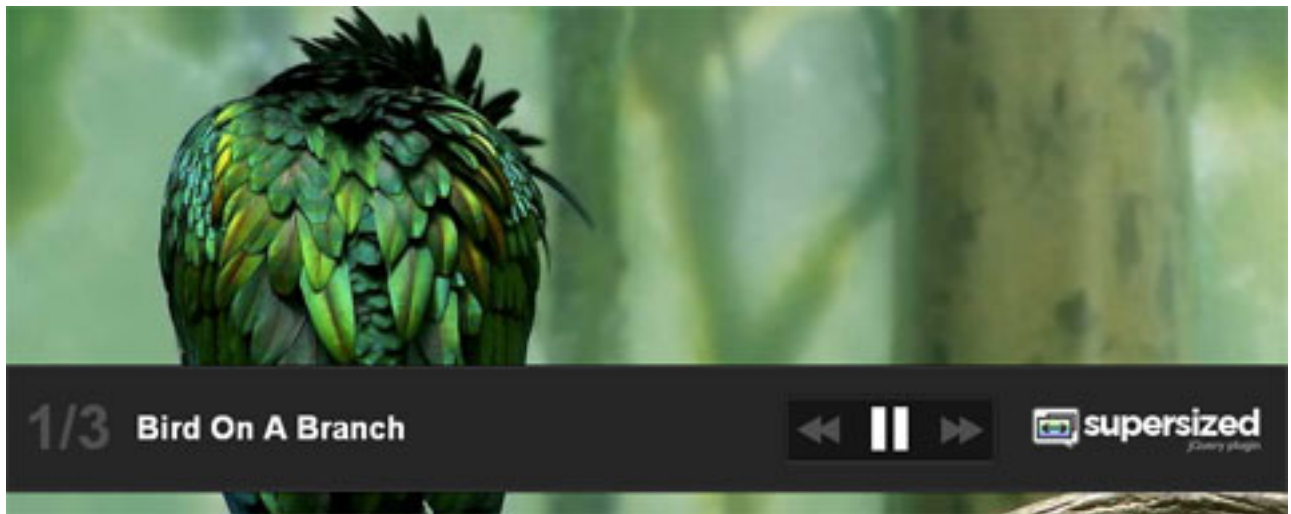

181   Administrator   Tue, Jan 5, 2010   Web Development   0   4010

Supersized is a jQuery plugin that resizes images to fit the whole screen & display them as a slideshow. No extra whitespace or scrollbars occur as the entire browser window is always filled.

The plugin preloads the images and offers various transition effects for presenting them. An optional prev-next-pause control makes navigating easier & with the help of options provided, Supersize can be easily customized.
