

Axiis - Open Source Data Visualization Framework

192 Administrator Thu, Jan 7, 2010 [Web Development](#) 0 4261

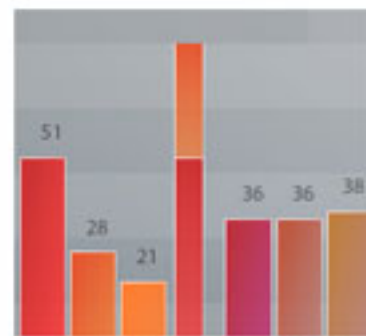

Axiis is an open source **data visualization framework** built upon the Degrafa graphics framework and **Adobe Flex** with **ActionScript 3**. Whether you are building **elegant charts** for executive briefings or exploring the boundaries of advanced data visualization research, Axiis has something for you. **Axiis** provides both pre-built visualization components as well as abstract layout patterns and rendering classes that allow you to create your own unique **visualizations**.

Wedge Stack Graph

Lines and Areas

Column Clusters and Stacks

It is a resource for both beginner & expert developers to create elegant charts. To view some beautiful examples of this framework, [click here](#).

Requirements: Adobe Flex

Website: <http://www.axiis.org>
