

Inline Form Validation With jQuery

201 Administrator Sat, Jan 9, 2010 [Web Development](#) 0 4008

Position Absolute is sharing an easy to use **form validation** engine built with **jQuery**. When it comes to **form validation**, it is always hard to have a versatile solution for every possible situation. Figuring out how to display errors is not a simple task and cannot be taken lightly. This **jQuery form validation script** is an attempt to solve this problem. It offers a flexible way of displaying errors that will possibly match any type of form design. When the script detects an error, it creates a div, positions it at the right-top corner of the input & displays it like a tooltip with the error message inside.

The screenshot shows a web form with several input fields. At the top, a red tooltip message says "* Please select 2 options" above three unchecked checkboxes. Below them is a date field with the value "1111-11-11" and a red tooltip message "* This field is required". Underneath is a dropdown menu for "Favorite sport 1:" with the text "Choose a sport" and a red tooltip message "* This field is required". Below that is another dropdown menu for "Favorite sport 2:" with the text "Choose a sport" and a list of options: "Tennis", "Football", and "Golf".

Validation rules are created inside the classes of every input field like:

It currently support rules like:

- required
- length
- telephone
- email
- onlyNumber
- onlyLetter
- & more

It will make your **form validation** as painless as possible. You can also create new regex rules very easily and it incorporate an easy way to create your language localization.

Requirements: jQuery

Compatibility: All Major Browsers
