

Inline Form Validation With jQuery

201 Administrator Sat, Jan 9, 2010 [Web Development](#) 0 3845

Position Absolute is sharing an easy to use **form validation** engine built with **jQuery**. When it comes to **form validation**, it is always hard to have a versatile solution for every possible situation. Figuring out how to display errors is not a simple task and cannot be taken lightly. This **jQuery form validation script** is an attempt to solve this problem. It offers a flexible way of displaying errors that will possibly match any type of form design. When the script detects an error, it creates a div, positions it at the right-top corner of the input & displays it like a tooltip with the error message inside.

The screenshot shows a web form with several fields and validation error messages displayed as red tooltips:

- radio 3:** A red tooltip with the message *** Please select 2 options** is positioned above three unchecked checkboxes.
- Date :** A text input field containing `1111-11-11` has a red tooltip with the message *** This field is required** positioned above it.
- Favorite sport 1:** A dropdown menu with the selected option `Choose a sport` has a red tooltip with the message *** This field is required** positioned above it.
- Favorite sport 2:** A dropdown menu with the selected option `Choose a sport` and a list of options (Tennis, Football, Golf) is shown below it.

Validation rules are created inside the classes of every input field like:

It currently support rules like:

- required
- length
- telephone
- email
- onlyNumber
- onlyLetter
- & more

It will make your **form validation** as painless as possible. You can also create new regex rules very easily and it incorporate an easy way to create your language localization.

Requirements: jQuery

Compatibility: All Major Browsers
