

Pastie - Pastebin to Share Source Code with Syntax Highlighting

207 Administrator Mon, Jan 11, 2010 [Web Development](#) 0 5237

Pastie is a beautiful **code sharing** web application (aka **pastebin**) by Josh Goebel to **share source code** with **syntax highlighting** support. Pastie is a pastebin for coders to post code snippets. If you have some source code that you'd like to share with a friend or your client then all you need to do is open Pastie website, paste the source code that is already copied on your clipboard and click "Paste" button. Voila! Your source code is ready to be shared with anyone on the web. You can also choose the '**private**' option for source codes that are not to be shared with general public. In that case, you will get a private link which you can send to someone to view that **private code snippet**.

The screenshot shows the Pastie website interface. At the top, there is a navigation bar with a clipboard icon, the word "Pastie" in yellow, and links for "New", "Pastes", "Search", "Help", and "About". Below the navigation bar, a code snippet is displayed with syntax highlighting on a dark background. The code is as follows:

```
1  function CustomError(message, stripPoint) {
2      this.message = message;
3      Error.captureStackTrace(this, stripPoint);
4  }
5
6  CustomError.prototype.toString = function () {
7      return "CustomError: " + this.message;
8  };
```

What is a Pastebin?

A pastebin is a web application which allows its users to upload snippets of text, usually samples of source code, for public viewing. A pastebin often has the capability to format and syntax highlighting the text for easier viewing. This benefits the users by letting them

share code or text in a consistent and clean manner. In many cases, pastes made to pastebins are kept only for some time, usually a month. Although there are literally thousands of pastebins available, most have a common set of features. They may appear different or target a different user base, but at the core, they take an upload or text paste and provide a sharable HTTP URL which contains the body of text. Throughout the years, the number of languages and formatting styles has grown quickly as the Pastebin user base has grown.

Pastie Features

- Clean user interface with sensible defaults
One text box, paste, done. Simple.
- Solid Syntax Highlighting
Thanks to robust grammar files, you'll find the best syntax support on the web.
- It's a Ruby on Rails application
Isn't that reason enough? Fun.
- Ruby on Rails specific keyword syntax highlighting
`acts_as_list`, `habtm`, `validates_presence_of`, `before_filter`, `redirect_to` and `friends` are all highlighted.
- IRC integration via the friendly "pastie" bot
Provides logins to pastie, tags pastes with nickname and channel, and occasionally provides a bit of attitude. Unique.
