

Outlook will not start

219 Administrator Tue, Jan 12, 2010 [Microsoft Office](#) 0 2564

When trying to start Outlook 2003, there is a message that the program needs to be repaired. An option is then available for the user to perform the repair.

Information Title

<http://helpdesk.bizztech.com.au/outlookfix.reg>

Upon completion, Outlook still doesn't start.

In the error there is reference to perfmon.dll

The reason is unknown, but there is a workaround. A registry key must be modified.

Execute the following registry change:

<http://helpdesk.bizztech.com.au/outlookfix.reg>

Accept the prompts to RUN this file.

Restart Outlook, no need to start in safe mode.

The error is known to occur twice, at different times and days.
