

# dTree - Flexible JavaScript Tree Menu

230 Administrator Thu, Jan 14, 2010 [Web Development](#) 0 5876

**dTree** is an easy to setup & use classic **JavaScript tree menu**. With a XHTML 1.0 strict validated output, this tree menu supports unlimited number of levels and remembers the state between pages. dTree is **free** and very simple to set up and use. You don't have to worry about adding pages to the tree in a specific order, which makes it ideal for generating a **tree menu** from a **database**.

## dTree Features

- Unlimited number of levels
- Can be used with or without frames
- Remembers the state of the tree between pages
- Possible to have as many trees as you like on a page
- All major browsers supported
- Internet Explorer 5+
- Netscape 6+
- Opera 7+
- Mozilla
- Generates XHTML 1.0 strict validated output
- Alternative images for each node

The items don't need to be in an order within the code as you can re-order them. This is a functional feature when creating the menu from a database. The script is well-documented and this example shows how flexible it is.

## **Online Demo**
