

Apple iPad GUI in PSD Format

283 Administrator Thu, Feb 4, 2010 [Computer Graphics](#) 0 2782

Geoff Teehan created **Apple iPad GUI PSD** so that we want to start designing for it. The PSD was constructed using vectors, so it's fully editable and scalable. Ever since Apple has officially released the iPad, graphic designers want to start designing interfaces for it.

While Apple's interface builder is great, it doesn't really allow you to create custom UI elements on the fly. That's why Geoff Teehan created **iPad GUI PSD** for us. You'll notice there are a few new UI elements as compared to the iPhone interface. The workable screen design is formatted to 768x1024 pixels so anything you design in the Photoshop file can easily be brought over to the SDK.
