

# How to change the file type using htaccess?

389 Administrator Sun, Mar 14, 2010 [Web Development](#) 0 3786

Use the following htaccess code to make any file be a certain kind of file type. The htaccess code below makes image.jpg, index.html, default.cgi all act as php. Put this code in your htaccess file.

```
ForceType application/x-httpd-php
SetHandler application/x-httpd-php
```
