

How to change default web page using htaccess?

391 Administrator Sun, Mar 14, 2010 [Web Development](#) 0 4120

Use the following htaccess code to change the default web page or to set a custom webpage as the default page for your website. For example in the code below, the default page is set as about.html instead of index.html

```
# serve alternate default index page
```

```
DirectoryIndex about.html
```
