The Ultimate Web UI Kit - PSD file

GraphicRiver has released an ultimate **Web UI Kit** that contains all **Web UI elements** in a PSD file. Included is a comprehensive set of Web UI elements that are intended to help designers save time, money, & headaches when they are mocking up web pages. Having spent countless hours mocking up websites myself, I've learned that there are some elements that I re-use quite a bit to speed up the design process on non-creative elements. Specifically, I have broken out all of the standard web ui elements that web designers use on a regular basis & recreated them in separated layers that are ready for quick placement, restyling, & scaling.

Each individual **UI element** is on it's own layer, ready for you to drag and drop into your own PSD . Some of the elements that commonly require scaling are already separated by element (ie: scrollbars each have a top arrow/bottom arrow/scroller/track).

Here's the full list:

- 4 Mouse Cursors
- 3 Styles of check boxes (on/off)

- 3 styles of radio buttons (on/off)
- 5 Styles of Next/Prev buttons (left/Right)
- 10 styles of Form Fields
- 5 Dropdown Styles
- 10 Button Styles80
- 20 Miscelleneous Elements (toggles, arrows, close buttons, etc.)
- 4 Tooltip styles
- 10 Scrollbars

Fonts Used: Lucida Sans – Standard Web/System Font
