# Create Excel 2007 Documents in PHP with PHPExcel

575  Administrator  Sat, Jul 17, 2010  [Document Management](#)   1  3196

A set of PHP classes for writing to and reading from different file formats, like Excel, PDF and HTML. It supports many MS Excel features like adding worksheets to a spreadsheet, inserting data and formulas to cells, calculating formulas and much more. This project is built around Microsoft's OpenXML standard and PHP.

**PHPExcel Features:**

- Create an in-memory spreadsheet representation
- Set spreadsheet meta data (author, title, description)
- Add worksheets to spreadsheet
- Add data and formulas to individual cells
- Merge cells
- Protect ranges of cells with a password
- Supports setting cell width and height
- Supports different fonts and font styles
- Supports formatting, styles, cell borders, fills, gradients
- Supports hyperlinks
- Supports different data types for individual cells
- Supports cell text wrapping
- Supports conditional formatting
- Supports column auto-sizing
- Supports rich-text strings
- Supports autofilter
- Supports "freezing" cell panes
- Supports cell-level security
- Supports workbook-level security
- Supports worksheet-level protection
- Group rows/columns
- Cell data validation
- Insert/remove rows/columns
- Named ranges
- Worksheet references
- Calculate formula values
- Add comments to a cell
- Add images to your spreadsheet

and a lot more....!
