

ZeusCart | Feature Rich Open Source E-Commerce System

577 Administrator Fri, Jul 16, 2010 [Internet Based Business](#), [Web Development](#) 0 5170

ZeusCart is an open source e-commerce application that is built with PHP and MySQL. The application has support for selling any type of items (including digital goods) where items can have multiple properties like color, size and multiple images. Visitors can quickly checkout as guests or they can be forced to become a member and it'll be possible to offer more features like wishlists, easier checkouts on next purchases, etc.

Products sold via ZeusCart can be promoted with the built-in flexible coupon discount

system. It supports multiple currencies and various payment providers (PayPal, 2Checkout, Bluepay, Google Checkout, etc.).

The ajaxed admin interface is well-planned and easy to navigate. You can instantly view the most important stats, latest customers or sales. ZeusCart also has CMS capabilities which makes it possible to create content (like FAQ, blog, etc.) under the website.
