

# What is Hyperhidrosis or Excessive Sweating?

611 Administrator Sat, Jul 31, 2010 [Beauty & Health](#) 0 2720

Excessive Sweating or what is medically called Hyperhidrosis is a common disorder affecting many people. It affects underarms, palms, foot and the face. Sweating is often uncontrollable, embarrassing and not anticipated. Normal sweating is needed for thermal regulation however in people suffering from hyperhidrosis, sweating exceeds the body's need for physiological thermal regulation.

Affected people are constantly aware of their conditions and try to modify their lifestyle to accommodate this problem. This can be disabling in professional, academic and social life causing daily embarrassments. Many routine tasks become impossible chores which can psychologically drain these individuals on a constant basis.

## **BOTOX For Excessive Sweating**

Unlike available options like antiperspirants, BOTOX® targets sweating at its sources. With a few tiny injections given by the doctor, BOTOX® enters the specific glands at the targeted sites responsible for excessive sweating. It blocks the release of the chemical that secretes the perspiration at the targeted site. This simple safe procedure take about 20 minutes.

## **BOTOX Treatment for Hyperhydrosis**

- Now you don't have to sweat over excessive sweating hyper-hydrosis, which usually plays a havoc on your mind, making you apprehensive about mixing freely in society. For unlike available options like antiperspirants, BOTOX® treatment for hyper-hydrosis targets sweating at its sources.
- With a few tiny injections given by the doctor, BOTOX® enters the glands at the targeted sites responsible for excessive sweating.
- It blocks the release of the chemical that secrete the perspiration at the targeted site.
- This simple safe procedure takes about 20 minutes.
